Design Flexibility

Won-Door FireGuard AFG

SECURITY SOLUTIONS

Won-Door's FireGuard AFG access control and fire door provides the latest in technology for security and fire protection needs.

- Limit after-hours access
- Lock down the entire building at the push of a button, *or...*
- Compartmentalize specific sections of the building, *or...*
- Remotely operate an individual door
- Serves as both a physical and visual barrier

Retrofit & New Construction

FireGuard AFG doors can be included in new construction projects during the design phases to protect and secure *virtually* any opening. Likewise, with minimal door stack and the utilization of the flat leadpost, the doors also integrate seamlessly into existing facilities.

High Speed

Traveling at over twice the speed of the FireGuard door, the FireGuard AFG **compartmentalizes** and **hardens buildings** in seconds while still meeting ADA requirements and allowing for safe and secure passage.

Cost Effective

Minimizes costs by allowing for security components to be included on fire-rated doors. Increases leasable space, replaces costly fire-rated glass and lowers maintenance costs, providing for more spacious architecture...*for less.*

Code Compliant

Meets the NFPA and IBC requirements for use in a means of egress. Prohibits security threats from entering while still allowing for emergency egress.

Remote Monitoring

Allows monitoring *and* control from a secure onsite location or from a remotely located office or device.
